## CAN32 Dual CAN-Bus Development Board

### Overview

Espressif ESP32-C6-WR00M-1
32-bit RISC-V single-core
microprocessor, up to 160 MHz
320 KB R0M
512 KB SRAM
16 KB Low-power (LP) SRAM
Operating frequency: 2412 ~ 2484 MHz
IEEE 802.11ax-compliant
Compatible with IEEE 802.11b/g/n
Bluetooth 5 LE

Compliant with IEEE 802.15.4-2015 protocol 8 MB external SPI flash

#### Expansion port

Offers power rails, USB, CAN-Bus, and multiple GPIO pins for  $I^2\text{C}$ , Serial, and other functions

#### Sychronous step-down DC-DC converter

Qualified for automotive applications Input up to 14.5V, 3.3V output Typically 17µA quiescent current

> microSD card slot Connected via SPI With detect switch

#### Castellated pads

Allow for easy integration into custom PCB designs All ESP32 pins, USB, CAN-Bus, and power broken out

#### 120Ω resistor jumpers

P

Can optionally be enabled based on implementation

#### Addressable RGB LED

Dual CAN-Bus transceivers
High-Speed Operation Up to 1Mbps
Four Operating Modes
Robust ESD Protection
8µA supply current in Standby mode

Boot and Reset switches

Integrated USB Type-C port
